

The country experiences substantial nutritional challenges mainly related to overweight in adults, adolescents and children and healthy life expectancy is among the lowest in the EU; agriculture is characterised by low pressure on freshwater resources due to agriculture, and high carbon content of soil; a food waste reduction strategy exists, but much more needs to be done on the policy side.

FOOD SUSTAINABILITY INDEX PERFORMANCE

COUNTRY SCORE

NUTRITIONAL CHALLENGES

75 years life expectancy at birth

65 years healthy life expectancy

58% of adults are overweight

22% of children and adolescents are overweight

71% of the population reaches recommended physical activity levels

12% of calories from sugar

4.19 g of sodium per day

Food-based dietary guidelines are published on a national level

AGRICULTURE

0.1% of renewable water used in agriculture

54.5% of fish stocks overexploited or collapsed

3% of average soil organic carbon (content in weight)

598,523 ha are deforested each year

1.4 ton CO₂ eq. per ha are GHG emissions from agriculture

0.44% of GDP government expenditure on R&D

52 years average age of farmers

6% of youth (under 35) works in agriculture

50.9% of farmers are women

FOOD LOSS AND WASTE

50 kg/yr per capita food waste
